Protect All natural stone is porous to some degree. If not properly treated with a protective sealer, stains such as water, oils and other liquids can easily penetrate the stone, leaving unsightly stains that damage the stone. The same is true with the grout surrounding tile. The good news is that once treated with a protective sealer, natural stone, tile, masonry and grout are ready for carefree, everyday use.

travertine, sandstone, flagstone, Saltillo

Recommended Surfaces: Natural

travertine and bluestone.

stone such as granite, limestone, slate,

and bluestone.

epoxy grouts.

Clean When cleaning natural stone and tile, it's important to use cleaners specially formulated for those surfaces. Many general purpose cleaners contain acidic and alkaline ingredients, abrasives, or ammonia, and can break down sealers and damage stone surfaces. Our cleaners are carefully formulated by scientists who understand how to care for stone and tile surfaces. Choose from our daily cleaners or for tougher jobs, use one of our specially designed heavy duty products.
